	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
		<u>Star I</u>	ong Term Planning: Half 1.	ermly Units		
Unit Focus	Technology around Us [DL]	Using the Internet (Tw)	Desktop Publishing [IT]	Photo Editing [IT]	Creating and Presenting [IT] (e.g. Animotica)	Spreadsheets [IT]
Online safety Focus	Health, Wellbeing and Lifestyle What can we do if we see something online we don't like?	SMART rules What rules should we follow to keep safe online?	SMART rules How can we keep ourselves safe online?	SMART rules Who can we talk to if we are worried?	SMART rules How can we use the SMART rules to help people with online safety problems?	SMART rules – CEOP website What advice can we give to help others online?
Uni Focus	Digital Painting [IT]	Digital Music [IT]	Connecting computers [DL]	Statistics [IT]	3D Modelling [IT]	Presenting [IT]
Online safety Focus	Online Bullying How can we be safe and respectful online?	Online Bullying How should we respond to someone being unkind online?	Self-image and Identity How do people represent themselves online?	Self-image and Identity How can people change their identity online?	Self-image and Identity How easy is it to change information online?	Self-image and Identity What is gender stereotyping and where is it found?
Unit Focus	Grouping Data [IT]	Pictograms [IT]	Online Polling [IT] (e.g. Poll Maker)	Word Processing [IT/DL] (e.g Word)	Systems and Searching [DL]	Publishing/Word Processing [IT] (e.g. Publisher/Word)
Online safety Focus	Privacy and Security What is personal information? Copyright and Ownership Is it fair to take someone else's work?	Online Relationships Who is in our online community?	Online Relationships How can we be a good digital citizen?	Online Relationships How can we show respect online?	Online Relationships How can people cause harm online?	Online Relationships Online Reputation What can I do to look after my friends online?
Unit Focus	Basic algorithms [CS] (practical)	Basic algorithms [CS] (practical)	Stop frame animation [IT]	The Internet [DL]	Programming – Games [CS]	Sensing Movement [CS]
Online safety Focus	Online Reputation Would we share this information online?	Online Reputation Can people hide their identity online?	Online Reputation How can we communicate kindness online?	<b>Online Reputation</b> How can we keep games fun and friendly?	Online Bullying How can we stop online bullying? Managing Online Information Is everything online true?	<b>Online Bullying</b> How can I collect evidence of online bullying to tell someone?
Unit Focus	Moving a Robot [CS]	Programming Animations [CS]	Programming – Sounds [CS]	Repetition in Shapes [CS]	Selection in Quizzing [CS]	Variables in games [CS]
Online safety Focus	Managing Online information What should we do if we are worried about being online?	Privacy and Security How can we keep our information safe?	Managing Online Information What is the difference between facts, opinions and beliefs?	Health, Well-being and Lifestyle Can technology be negative?	Health, Wellbeing and Lifestyle What is clickbait and how can we avoid it?	Phishing What is phishing and why does it exist?
Unit Focus	Creating Digital Writing [IT]	Computer systems [DL]	Programming – Events and Actions [CS]	Programming – Repetition in Games [CS]	Introduction to Vector Graphics [IT]	Computer Systems and Networks – Communication and Collaboration [DL]
Online safety Focus	Online Relationships What should we do if someone makes us feel sad online?	Copyright and Ownership Can we copy and paste other people's work?	Privacy and Security What makes a strong password?	Privacy and Security Why should we not share private information online?	Copyright and Ownership – What is plagiarism?	Copyright and Ownership What makes a strong password and why is security important?

Computer Science [CS] – Declarative and Procedural Knowledge								
	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6		
	Know that algorithms are sequences of instructions. Know how to create a simple	Know that algorithms are sequences of instructions or sets of rules.	Know that algorithms are sequences of instructions or sets of rules.	Know that algorithms are sequences of instructions or sets of rules.	Know that algorithms are sequences of instructions or sets of rules.	Know that algorithms are sequences of instructions or sets of rules.		
	unplugged algorithm using everyday language or symbols (e.g. instructions for a Lego model).	Know how to create a more complex unplugged algorithm using everyday language or symbols (e.g. how to share	Know that sequencing commands are step-by step instructions.	Know that repetition commands are repeated instructions that loop until a condition has been met.	Know that selection commands are instructions that are followed only if certain conditions are met.	Know that variable commands are instructions for the computer to store information inputted by the user, that are then used by		
Algorithms and Programming	Know how to create a simple program using algorithms on a digital device, with support (e.g. plan steps to control a Bee Bot). Begin to know how to debug an algorithm (e.g. correct instructions given as an unplugged task or to a BeeBot)	symbols (e.g. how to share sweets). Know where to find the commands to move a sprite. (Scratch Jr) Know how to join blocks together. (Scratch Jr) Know how to run the program they have created. Know how to create an on- screen program using algorithms (e.g. Scratch Jr).	<ul> <li>Know the basic features of Scratch (e.g. sprite, background, blocks)</li> <li>Know the relationship between an event and an action in programming.</li> <li>Know where the main types of blocks are located on Scratch.</li> <li>Know how to create a simple program using a block language, without user interaction (e.g. create a simple animation in Scratch with a sprite, dialogue and background)</li> <li>Know how to use sequences of commands or blocks in on-screen programming, producing an output on the screen (e.g. a simple animation in Scratch).</li> </ul>	met. Know that loops can be count- controlled or infinite. Know how to create a program using a block language, with simple user interaction (e.g. create a simple game involving use of backgrounds, props, sprites, costumes, sound). Know how to use sequences & repetition [e.g. repeat until] of commands or blocks in on- screen programming, inc keyboard inputs & on-screen outputs (e.g. write a game using Scratch with repeated commands) Know how to use a count- controlled loop both in a real life context and on programming	Know how to independently create, test & debug complex programs using a block language (e.g. create, test & debug a Scratch game or animation). Know how to use sequences, selection [e.g. ifthen] and repetition [e.g. repeat until] of commands or blocks in on-screen programming, including both keyboard/mouse inputs, and on- screen outputs.	the user, that are then used by the program. Know that selection can control the flow of a program. Know how to use sequences, selection [e.g. ifthen], variables & repetition [e.g. repeat until] of commands/blocks in on-screen programming. Develop, create, debug & computer control applications (e.g. develop use of Lego WeDo or Micro:bit) using their knowledge of selection, variables and repetition.

(e.g. collecting data for a branching database)		considering input, output and connectivity, the operating system, algorithms, code and user interface Know how to use spreadsheet formulae to calculate & present numerical data (e.g. design a maths quiz in Excel)
Searching	Know how to search for information more safely using 'for kids'. Know where to search for images safely. Know how to click on a weblink.	Know how to search for informati browser-specific tools (e.g. 'find,, 'search', 'autocomplete'). Know that search engines select p keywords found in the content, an relevance.	ion within a single site, using 'back') & site-specific tools (e.g. pages according to index of nd that they rank pages according to	Know how to use search engines effectively. Know that search engine results are ranked and selected.	

	Digital Literacy [DL] - Declarative and Procedural Knowledge						
	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	
Self-image and identity	Know that there may be people online who could make them feel sad, embarrassed or upset. Give examples of when and how to speak to a trusted adult.	Explain and describe how other people's identity online can be different to their identity in real life. Give examples of issues online that might make them feel sad, worried, uncomfortable or frightened; give examples of how they might get help.	Understand 'identity' and explain they can represent themselves online in different ways; explain ways in which and why they might change their identity depending on what they are doing online (e.g. gaming; using an avatar; social media).	Explain how their online identify can be different to the identify they present in 'real life'; knowing this, describe the right decisions about how to interact with others and how others perceive them.	Explain how identity online can be copied, modified or altered.	Describe ways that media can shape ideas about gender. Identify messages about gender roles and make judgements based on them. Describe issues online that might make them or others feel sad, worried, uncomfortable or frightened and give examples of how they might get help, both on and offline. Explain why they should keep asking until they get the help I need.	
Online relationships	Use the internet with adult support to communicate with people they know. Explain why it is important to be considerate and kind to people online.	Use and exemplify ways that the internet can be used to communicate with people they don't know well (e.g. email a penpal in another school/ country).	Explain why they should be careful who they trust online and what information they give, and explain some risks communicating online with others they don't know well. Explain what it means to 'know someone' online and why this might be different from knowing someone in real life. Explain how to be a good digital citizen.	Describe strategies for safe and fun experiences in a range of online social environments. Give examples of how to be respectful to others online.	Explain that there are some people they communicate with online who may want to do them or their friends harm, and recognise that this is not their fault. Make positive contributions and be part of online communities.	Understand their responsibilities for the well-being of others in their online social group. Know how they would support others (including those who are having difficulties) online. Demonstrate ways of reporting problems online for both them and their friends.	
Online reputation	Describe what information they should not put online without asking a trusted adult first.	Explain how information put online can last a long time. Know who to talk to if they think someone has made a mistake about putting something online.	Know how to search for information about themselves online. Recognise they need to be careful before putting info about themselves of others online. Know who to ask if they are not sure if they should put something online.	Explain how to keep online games fun and friendly.	Know how to search for information about an individual online and create a summary report of the information I find. Describe ways that information about people online can be used by others to make judgments about an individual.	Explain how they are developing an online reputation which will allow other people to form an opinion of them. Describe some simple ways that help build a positive online reputation.	

0

	Digital Literacy [DL] - Declarative and Procedural Knowledge							
	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6		
	Begin to know how to behave online, in ways that do not upset others.	Give examples of bullying behaviour online, understand how it can make people feel and talk about how compone could	Explain what bullying is and can describe how people may bully others.	Identify some online technologies where bullying might take place and describe	Recognise when someone is upset, hurt or angry online.	Know how to capture bullying content as evidence (e.g. screen- grab, URL, profile) to share with others who can belo me		
	Explain what to do if they feel sad or worried about something online.	get help online or offline.	Know how to behave online.	through a range of media (e.g. image, video, text, chat).	someone that is being bullied online and assess when they need to do or say something or tell someone.	Identify a range of ways to report concerns both in school and at home about online bullving.		
Online bullying				carefully about how content they post might affect others, their feelings and how it may	Know how to block abusive users			
				affect how others feel about them (their reputation).	Know how to report online bullying on the apps and platforms they use.			
					Know how to use the helpline services who can support them and what they would say and do if they needed their help (e.g. Childline).			

	Digital Literacy [DL] - Declarative and Procedural Knowledge						
	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	
Health, well- being and lifestyle	Describe and explain rules to keep them safe when using technology both in and beyond the home.	Describe and explain rules to keep them safe when using technology both in and beyond the home, and say how these rules guide them	Describe and explain rules to keep them safe when using technology both in and beyond the home, and say what advice they could give to others to stay safe online.	Explain how using technology can distract from other things that should or need to be done. Identify times and situations when technology use may need to be limited, and suggest strategies for doing this.	Describe ways technology can affect healthy sleep and describe advice to promote healthy sleep accordingly.	Describe common systems that regulate age-related content (e.g. PEGI, BBFC, parental warnings) and describe their purpose. Explain the importance of self- regulating use of technology and demonstrate strategies do this (e.g. monitoring time online, avoiding accidents). Know how to assess and action different strategies to limit the impact of technology on health (e.g. nightshift mode, regular breaks, correct posture sleen diet)	
Privacy and security	Recognise examples of personal information (e.g. name, date of birth, family's names, school). Explain why they should always ask a trusted adult before sharing any personal information online.	Describe how online personal information could be seen by others. Describe and explain some rules for keeping information private. Explain what passwords are and use passwords for accounts and devices.	Explain how to create a strong password and how to keep this safe.	Explain that others online can pretend to be them or other people, including friends, and suggest reasons why they might do this. Explain how we keep our personal information safe.	Know how to create, use and secure passwords. Explain how many free apps or services may read and share private information (e.g. friends, contacts, likes, images, videos, voice, messages, geolocation) with others. Explain how and why some apps may request or take payment for additional content (e.g. in-app purchases) and explain why they should seek permission from a trusted adult before purchasing. Explain what clickbait is.	<ul> <li>Know how to use different passwords for a range of online services, and describe effective strategies for managing those passwords (e.g. password managers, acronyms, stories).</li> <li>Explain what app permissions are and give some examples from the technology or services they use.</li> <li>Describe simple ways to increase privacy on apps and services that provide privacy settings.</li> <li>Describe ways in which some online content targets people to gain money or information illegally and describe strategies to help identify such content (e.g. scams, phishing).</li> </ul>	
Copyright and ownership	Explain why work they create belongs to them and save it so that others know it belongs to them.	Describe why other's work belongs to them, and recognise that content on the internet may belong to other people.	Explain why copying someone else's work from the internet without permission can cause problems, and give examples of these problems.	Explain why they need to consider who owns content that is searched for, whether they have the right to use it, and give examples.	Know when it's acceptable to use the work of others, and give examples of content where it is permitted to be re-used. Explain what plagiarism is.	Know how to use search tools to find and access online content which can be reused by others, and demonstrate how to make references to and acknowledge sources they have used from the internet	
Communication and Collaboration	Know how to work collaboratively to create a set of instructions linked to algorithms.	Know how to work collaboratively on a class blog page, such as using a Teams channel or Padlet.		Know how to work collaboratively with classmates on a shared project such as a class Wiki.	Know how to work collaboratively with classmates on a class website or blog.	Know how to use online tools to plan and carry out a collaborative project (e.g. presentation, website design).	

### Subject Knowledge and Terminology Required for Understanding National Curriculum Statements

#### Key Stage 1 Computer Science [CS]

<u>Understand what algorithms are; how they are implemented as programs on digital devices; and that programs execute by following precise and unambiguous instructions.</u> An *algorithm* is a precisely defined procedure – a sequence of instructions for performing a specific task. *Computer programs,* like *algorithms,* are comprised of sets of rules or instructions, but they differ in that they need to be written in a precise language a computer can 'understand'. A computer's central processor understands a very limited set of simple instructions written in *machine code.* Very few programmers work at this level, so computer scientists have developed *programming languages,* which sit somewhere between the ideas in the algorithm and the computer's machine code. There are many different programming languages, each having their own vocabulary, grammar and features that make them good for particular tasks. The current favourites in primary schools are *Scratch, Logo and Kodu.* 

<u>Create and debug simple programs</u>: The best way for pupils to learn what an algorithm is, and how it can be implemented as a program, is to write some programs. Programming involves taking an idea for doing something and turning it into instructions the computer can understand. In the infant classroom this could be writing a set of commands for a Bee-Bot, ProBot or Roamer, or snapping on-screen program building blocks together in Scratch. When you write a program you need to have a clear idea of what it will do and how it should do it. This is where algorithms come in, and thinking algorithmically is an integral part of the craft of programming. \_Most programs don't work as they should first time round; professional programmers have this experience all the time! One of the most rewarding aspects of programming is finding and fixing these mistakes. Mistakes in programs are called *'bugs'*, and finding and fixing them is *'debugging'*. The process of debugging often involves identifying that there is a fault, working out which bit of the program (or underlying algorithm) has caused the problem, and then thinking logically about how to fix it. In the classroom, this can provide a great opportunity for collaborative work. As a teacher, you should identify clear steps that pupils can follow so that they can fix their code. These might involve identifying what the fault is, finding out which part of the code is creating the problem, and then working towards a fix.

<u>Use logical reasoning to predict the behaviour of simple programs</u>: Computers are deterministic machines. We can predict exactly how they'll behave through repeated experience or by developing an internal model of how a piece of software works. Stepping through the program can give a clear sense of what it does, and how it does it, giving a feel for the algorithm that's been implemented. In the classroom, getting one pupil to role-play a floor turtle or screen sprite while another steps through the program can give a far more immediate sense of what's going on. When working with a computer, encourage pupils to make a prediction about what the program will do before they press return or click the button, and to explain their prediction logically; this is part of computer science. *Logical reasoning* also implies that pupils are following a set of rules when making predictions.

# Key Stage 1 Information Technology [IT]

Use technology purposefully to create, organise, store, manipulate and retrieve digital content: Creating digital content has many practical possibilities. These include commonplace tasks such as word-processing, creating pictures using paint packages, working with digital photographs and video, writing computer programs, and creating online content such as blog posts, forum contributions, wiki entries and social network updates. This creative work is digitised (i.e. converted to numbers) once it's on the computer. The sheer quantity of digital information makes the skill of *organising digital content* more important than ever. In more practical terms, we might think of how to bring together different digital media, how to order a series of paragraphs, how to organise the files in our documents directory, or how to tag photos and posts online. Knowing where a file is saved in the directory structure is important. It's vital to be able to distinguish between the hard disk (or solid state storage) inside the computer itself, the school's network server, USB disks or memory cards, and online storage via the internet. *Manipulating digital content* is likely to involve using one or more application programs, such as word-processors, presentation software, or image-, audio- or video-editing packages. The pupil makes changes to the digital content. The skill here is not just using the software tools, but also knowing how best to change the content for the audience and purpose, and to take into account principles of good design. *Retrieving digital content* could be seen as the reverse of storing: the skills of opening and saving documents are similar. Retrieving content requires you to know what you called the file, what file type it is, and where you stored it. Finding files can be time-consuming, especially when the filing system is not well organised. Computer filing systems have search features to make this easier, but are reliant on the user remembering enough about the file to be able to search.

# Key Stage 1 Digital Literacy [DL]

<u>Recognise common uses of information technology beyond school:</u> Digital technology is a part of all our lives. A key stage 1 pupil might be woken by a digital alarm clock, have a bowl of microwaved porridge for breakfast, and then watch digital TV or play an iPad game. While they're at school, their attendance, progress and lunch are tracked through the management information system, they engage in activities on tablets, and research things on the web. \_The ingredients for the evening meal may have been ordered online, or a parent may have scanned them at the supermarket. There are many opportunities for pupils to consider the applications of algorithms, programs and systems.

Use technology safely and respectfully, keeping personal information private; identify where to go for help and support when they have concerns about content or contact on the internet or other online technologies: This statement covers the key principles of pupils' online safety. Pupils should be aware of the main risks associated with the internet, and recognise that they should not share certain types of personal information online. Pupils should have an age-appropriate understanding of their responsibilities under the school's acceptable use policy.

## Subject Knowledge and Terminology Required for Understanding National Curriculum Statements

#### Key Stage 2 Computer Science [CS]

Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts: The focus on algorithms at key stage 1 leads pupils into the design stage of programming at key stage 2. Algorithms are the necessary start of the process of creating working code, and identifying the steps needed to solve any problem is essential. Splitting problems into smaller parts is part of computational thinking. For example, designing a game in Scratch will involve thinking about algorithms, programming, drawing sprites and backgrounds, making animations, and even composing music or recording sound effects.

Computing Concepts - Use sequence, selection, and repetition in programs; work with variables and various forms of input and output:

- Sequence in this context is the step-by-step nature of computer programs, mirroring the sequence of steps the algorithm would list.
- Selection refers to instructions such as <u>if ... then ... otherwise</u> decisions in which the operation (what the program does) depends on whether or not certain conditions are met. For example, a quiz provides different feedback if the player answers the question correctly or incorrectly. It is helpful to refer pupils to selections (choices) they make in everyday life; for example, if it rains in the morning, then I will wear my anorak to school, otherwise I won't.
- Repetition is a programming structure such as a repeat ... until loop in which the computer runs part of the program a certain number of times or until a particular condition is met. In the case of the quiz, we might want to ask ten questions, or keep going until the player has scored five correct answers. Again, it is useful to refer pupils to loops or repetition in daily routines. For example, the traffic lights on a pelican crossing will stay green until someone presses the button to cross the road.
- Variables are used to keep track of the things that can change while a program is running. They are a bit like x or y in algebra, in that the values may not initially be known. Variables are not just used for numbers. They can also hold text, including whole sentences ('strings'), or the logical values 'true' or 'false'. For our quiz we would use variables to keep track of the player's score and the number of questions they attempt. Variables are like boxes, in that the computer can use them to store information that can be changed by the user, the program or by another variable.

We may think of input as keyboard and mouse (or touch screen), and output as the computer display, but pupils' experiences should be widened beyond this. Working with sound is straightforward, as laptops have built-in microphones and speakers. The latest version of Scratch provides support for using webcams. Digital cameras allow interesting work using image files. The reference in the programme of study to 'controlling physical systems' implies the use of sensors, motors and perhaps robotics. Midi instruments like an electronic keyboard, and devices such as Lego WeDo, MaKey MaKey and Microsoft Kinect provide yet further experience of working with various forms of input.

<u>Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs:</u> Key stage 2 pupils should be able to explain the thinking behind their algorithms, talking through the steps and explaining why they've solved a problem the way they have. They also need to be able to look at a simple programming project and explain what's going on. This is made easier with languages like Scratch, Kodu and Logo, which feature an on-screen sprite or turtle. The immediate feedback helps pupils to understand and debug their programs. Pupils might also be expected to look at someone else's algorithm and explain how it does what it does.

Understand computer networks including the internet; how they can provide multiple services, such as the world wide web; and the opportunities they offer for communication and collaboration: This is a challenge because most of us have not thought about how these ever-present technologies do what they do. *Computer networks*, including the internet, are made up of computers connected together. The computers include fast, dedicated machines that pass on data that's not intended for them (called 'routers', 'gateways', 'hubs' or 'switches', depending on particular roles), and 'servers' (always-on machines looking after emails, web pages and files that other computers might ask for from time to time). The connections between the computers in a network may consist of radio or satellite signals, copper wires or fibre-optic cables. Information stored on computers and information travelling over networks must be digitised (i.e. represented as numerical data). The computer network in your school and the internet use the same method or 'protocol' to send and receive this data. The data is broken up into small 'packets', each with identifying information, which includes the IP (internet protocol) address of the sender and recipient. These packets of information make their way across the internet from source to recipient. At the far end, the packets get stitched back together in the right order and the email is delivered, the website is accessed, or the Skype call gets connected. Many of these packets, travelling at near light-speed, are generated by web servers returning web pages to the browser requesting them. By connecting people around the world and passing on packets of data from sender to recipient, the internet has created many opportunities. These range from communication (such as email, video conferencing, blogs, forums, social networks) and collaboration, such as wikis (including Wikipedia), to real-time collaborative editing, Creative Commons media (permission to share and use creative work with conditions state

#### Subject Knowledge and Terminology Required for Understanding National Curriculum Statements

## Key Stage 2 Information Technology [IT]

Use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content: Using search technologies involves aspects of computer science, information technology and digital literacy. Effective use of search engines gets the results you want. It relies on specifying the right keyword, skimming and scanning the results to see which seems most relevant, and distinguishing between the main results and adverts presented as sponsored results. It may also involve using other features7 of the search engine, including searching for phrases rather than keywords, or limiting searches to a particular time frame, language, reading level or website. Search engines take many factors into account. At the heart of Google's algorithms8 is 'PageRank', which determines the quality and rank of a page based on the quality of the pages that link to it. Their quality is, in turn, determined by the quality of the pages that link to them, and so on. Just because a page has a high rank in Google or another search engine for a particular query, it doesn't mean that the content is true, age appropriate or relevant to a particular project. Pupils need to develop skills in evaluating digital content, including how trustworthy the information is (perhaps by verifying it with another independent source), whether it's something that the audience for a project would be able to grasp, and why the content was posted in the first place (e.g. to give a balanced overview, or simply to advance one side of an argument).

Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information: \_\_This is something of a catch-all requirement, bringing together various aspects of the computing curriculum. Pupils might typically be expected to demonstrate progression by: using software under the control of the teacher; moving onto using software with increasing independence; then, combining software (e.g. importing an edited image or video into a presentation or web page); and then, selecting software themselves (perhaps from the full range of applications installed on computers, smartphones and tablets at home or at school, or available to them via the web). Internet services might include, for example, learning platforms, school, class or individual blogs, and cloud-based tools such as Google Drive, Office 365 or image-editing sites. There ference to 'a range of digital devices' encompasses using both fixed and mobile technologies. It also includes running software (such as that described in the previous paragraph) on web servers via the internet. There is also recognition that design and creativity in computing encompass many forms, from the content familiar to many from the ol ICT programme of study, the programming as required by earlier statements in the new programme of study, to more complex, system-level ideas, combining software and hardware to achieve a well-defined goal with a particular audience in mind. At key stage 2 it might be more helpful to think of *data* as numbers and *information* as richer media such as text, images, audio, and video or 3D representations. However, it is worth remembering that both data and information are digitised by computers (i.e. stored in the form of numbers). Collecting, analysing, evaluating and presenting data is an important application of computers. Pupils should gain experience o

# Key Stage 2 Digital Literacy [DL]

Use technology safely, respectfully and responsibly; recognise acceptable/unacceptable behaviour; identify a range of ways to report concerns about content and contact: Safe and responsible use of technology at key stage 2 builds on skills learned in key stage 1. As well as requiring pupils to keep themselves safe and to treat others with respect, the programme of study at key stage 2 introduces an emphasis on responsible use of technology. Pupils need to consider how their online actions impact other people. They need to be aware of their legal and ethical responsibilities, such as showing respect for intellectual property rights (e.g. musical, literary and artistic works), keeping passwords and personal data secure, and observing the terms and conditions for web services they use (such as the 13+ age restriction on Facebook). Pupils should also develop some awareness of their *digital footprint*: the data automatically generated when they use the internet and other communication services, and how this is, or could be, used. Pupils should be aware of, and abide by, the school's acceptable use policy, as well as the requirements of any other services they use. Encourage pupils to think twice, and to check terms and conditions, before signing up for internet-based services.
